Experience

Software Engineer 1 | HPE Juniper Networks – Bengaluru, Karnataka Jul 2024 – Present

- Contributed to the automation and development of 60+ scripts in **Google B4 network automation project** and **Amazon DX network**.
- Delivered a **75% reduction in deployment cycles**, significantly accelerating releases and provided end to end support during escalations.
- Developed modular scripts in **Python, Java, JavaScript** and **Robot Framework** to automate Junos based platforms at scale.
- Developed scalable, reuseable scripts for **telemetry validation** and **GRIBI route programming**, improving fault detection and overall system stability.
- Integrated modern protocols including **EVPN, OpenConfig, Telemetry, MPLS, gNOI** and **gRPC**.
- Worked using **FAST API** and **postgres** to develop internal tracking tools for engineer tasks communications .

Software Engineer Intern | HPE Juniper Networks – Bengaluru, Karnataka Jan 2024 – Jun 2024

- Led **ML** and **NLP** analysis of **PR data** to identify high-risk bug areas, boosting predictive accuracy. Explored decision trees, XGBoost, Regressions, LLMs and classification techniques
- Analyzed Problem Report data using **TF-IDF vectorizer, Logistic Regression** and **Random Forest**.
- Concluded research and optimization of **classification** and **forecasting models** to enhance performance.
- Delivered robust predictive models supporting a **production ready AI software tool**.

Projects and Publications

LLM-powered Semantic Book Recommender | Project Link

- Built a semantic book recommendation system using Hugging Face embeddings, LangChain, and ChromaDB for vector similarity search.
- Integrated emotion-aware logic to personalize suggestions and developed a simple front-end using Gradio for interactive recommendations.

DeepFake image and video detection using AI and ML techniques | Project Link

- This project focuses on detecting DeepFake images using pre-trained machine learning models such as Meso-4, Inception ResNet v1, and MTCNN for feature extraction and classification.
- **Publication:** Kritadnya Kaling Volume 4 , Issue 6, Nov-Dec 2023, DOI : IJEMH

FastAPI Blog Platform | Project Link

- Built a full-stack blogging platform with user authentication and CRUD operations for posts.
- Developed asynchronous REST APIs using FastAPI and SQLAlchemy Async ORM.
- Implemented JWT authentication, password hashing and protected API endpoints.
- Managed database versioning using Alembic migrations and used Postgres.
- Added image upload support and email-based account verification.
- Designed responsive frontend pages with Jinja2 templates, custom CSS and Javascript.
- Maintained the project using Git and GitHub.

Education

B.E. in Computer Science, Rashtreeya Vidyalaya College of Engineering, 2024
Senior Secondary, Army Public School, Bengaluru, 2020

CGPA: 9.0/10.0
Percentage: 95.6%

Technical Skills

Languages: Python, Java, JavaScript, HTML, CSS, SQL

Frameworks Tools: React, FastAPI, Robot Framework, Gradio, LangChain, Spring Boot

ML Data: Scikit-learn, Pandas, Hugging Face, NLP pipelines, classification/forecasting models, Time series, RAG, AI Agents, Vector databases, CI/CD, REST, gRPC, Pytorch, Tensorflow, Docker, Kubernetes
